

OSSD/IGM

2019 WASHINGTON, DC

Sex-specific regulation of energy metabolism by lifestyle and environmental factors across the lifespan

Increasing evidence supports the notion that the control of energy metabolism differs substantially between men and women, and rates of metabolic diseases have been shown to be sexually-dimorphic. This session will provide an outstanding overview of the wide array of stressors that can modulate energy metabolism in a sex-specific manner and how this modulation can occur at a variety of susceptible windows throughout life.

Second Joint OSSD/IGM Meeting
Washington, DC, USA
May 5 – 8, 2019
